(54) Title: METHOD AND DEVICE FOR CONTINUOUS PRODUCTION OF ICE-SOLUTION SUSPENSION

WO 01/14038 A1

(57) Abstract: A method of continuous production of ice-solution suspension wherein the solution being continuously fed (7) to the processing zone (6) is overcooled; then, the turbulization (14) is performed in the overcooled solution; as a result, ice microcrystals are formed in the solution; after that, the formed ice-solution suspension is removed (8) from the processing zone, in doing this, the said turbulization is chosen with such intensity that the formed ice microcrystals mass transfer balance will be positive, considering their adhesion on the internal surfaces in processing zone. An installation (1) for continuous production of ice-solution suspension is also described.
